Hello  Abhishek,

I have completed assignment. These are steps listed below, i have taken to complete the task.
Task 1: Merge "Branch 2" with "Master" and resolve conflicts if any using a pull                          request.
Step1:  git checkout Master
      2: git merge branch2
      3: conflict occured, so i removed conflict markers from Scene and added back                          to master git add
Scene7.txt
       4: commit and then push to master

Task 2: In "Branch 3", Revert back your code to "Scene 3 Good Commit" commit.
Step1: copied comment id from Scene 3 Good Commit
      2: used command git checkout commentid  Scene3.txt
      3: git add Scene3.txt
      4: git commit -m "coming to Scene 3 good commit"
      5: git push origin branch3

Task 3: Create a new branch 'Branch4' containing all the files of "Master".
 Step1: git checkout -b Branch4
      2: git checkout master
      3: git push origin Branch4

Task 4: Create a new file called 'Bad File' in Branch4 and commit it locally. Also add                          few files to git ignore and
commit the changes.
Step1: git checkout branch4
      2: gedit BadFile, wrote one line
      3: git add BadFile, then git commit -m "added locally"
      4: gedit .gitignore(*.txt) , git add .gitignore(*.txt),  and comiited

Task5: Now revert "Bad File" commit and push other changes if any.
Step1: git reset --hard HEAD~1 go to last second commit (Bad file)
      2: git push origin branch4

The task was very interseting. I hope to get more assignment like this. I am adding some screenshot of github related
to task.

Thanks and regards,
Ashvini Kumar
